POP3 Email Polling Configuration

In NexaDesk v1.0, email ingestion is handled strictly via scheduled POP3/IMAP polling.

System administrators must provide the mail server host, port 995 for SSL POP3, or port 993 for IMAP.
The email polling worker runs once every 10 minutes. Real-time push webhooks are NOT supported in v1.0.
Attachment Limitation: Incoming emails with attachments exceeding 5 MB will be rejected with an automated bounce notice.
Manual assignment is required for all imported emails.

SLA Policy and Resolution Deadlines

NexaDesk v1.0 defines fixed, non-customizable SLA resolution targets:

1. Urgent Severity: 4 hours total resolution deadline.
2. Medium Severity: 12 hours total resolution deadline.
3. Low Severity: 24 hours total resolution deadline.

Note on Business Hours: In v1.0, SLA clocks run continuously 24/7. Support for holiday calendars or business-hour exclusions is not available until future releases.
