Deprecation of POP3 and Real-Time Webhooks

Important Architectural Change in v2.0:

The legacy POP3 polling worker from v1.0 is officially DEPRECATED.
Incoming emails must now be routed via SendGrid Inbound Parse or Mailgun HTTP Webhooks, providing instant, sub-second ticket creation.
Maximum attachment size has been increased from 5 MB to 25 MB.
Customers still relying on POP3 must upgrade their inbound MX records to webhooks.

Live Chat Widget and Slack Integration

NexaDesk v2.0 introduces omnichannel communication:

- Web Live Chat Widget: Embeddable JavaScript snippet for customer portals.
- Slack Support App: Bi-directional sync allowing agents to respond to customer inquiries directly from dedicated Slack channels without opening the web dashboard.
