NexaDesk AI Copilot Architecture

NexaDesk v3.0 integrates deep generative AI directly into the agent response editor:

- Smart Draft Generator: Generates grounded response suggestions using company documentation.
- Ticket Sentiment Analyzer: Detects escalating customer frustration and alerts shift managers.
- Instant Thread Summarizer: Condenses 20+ message email chains into three bullet points.

AI responses must be reviewed and approved by a human agent before sending.

Enterprise SAML 2.0 and Multi-Brand SSO

Version 3.0 introduces Enterprise Identity Management:

- Native SAML 2.0 integration supporting Okta, Microsoft Entra ID (Azure AD), and Google Workspace.
- Just-In-Time (JIT) user provisioning with SCIM 2.0.
- Multi-Brand Customer Portals: Manage up to 10 distinct brands with separate styling and domain names.
